

# VOLUNTEERS NEEDED FOR CLINICAL RESEARCH STUDIES

## TCDD is Houston's 1st Choice for Clinical Studies

### Do you need treatment for Type 2 Diabetes, High Blood Pressure or High Cholesterol?

If you are 18 years old or older, the doctors at TCDD may be able to help. Qualified patients receive:

- high-quality medical care from expert clinicians,
- all study-related treatment and investigational medication at no charge,
- financial compensation for time and travel.

#### About Our Clinic

The Texas Center for Drug Development is an independent clinical research company dedicated solely to conducting FDA-approved studies of promising new medicines. While we conduct drug studies in many therapeutic areas, our focus is on the diseases that affect Houstonians the most: diabetes, hypertension, high cholesterol and obesity. It is our goal to provide the highest quality health care to as many of our fellow Texans as possible while working to develop new life-saving medicines for the benefit of the whole world.

Since TCDD is paid directly by the pharmaceutical companies that make the new medicines, all treatment for the patient is free. We are able to provide quality medical care to individuals other clinics frequently cannot treat, including patients without health insurance or a social security number. Medicare and other health insurance policies are never billed.

**Recognized as a Center of Excellence by top pharmaceutical companies**

- A 6,500-square-foot research clinic with the latest medical equipment
- More than 100 clinical studies conducted in the last four years with 10 major pharmaceutical companies
- A Principal Investigator/Medical Director who has more than 20 years of clinical trials experience and who is an Adjunct Professor of Baylor College of Medicine
- Four sub-investigators who are board certified in internal medicine, family practice, gastroenterology and ophthalmology
- Eight clinical research coordinators, six of whom are foreign medical graduates working as MD coordinators
- A registered dietician to provide dietary counseling
- A network of private physicians acting as sub-investigators, providing coverage and patient referrals
- Active community programs including medical fairs, free health screenings and counseling in diet and exercise
